- Understand how all firearms function
- Be able to repair ANY firearm - ANY!
- Build specialized custom firearms
- Start a career you enjoy
- Part-time, Full-time or for additional Retirement Income
- Video instruction with cut-away firearms

START GUNSMITHING PROFESSIONALLY IN AS LITTLE AS 90 DAYS BY STUDYING AND WORKING FROM HOME! HERE'S HOW . . .

Experience the sheer joy of learning real gunsmithing from Master Gunsmiths through this premier, study at home trade school level program, fast and easily, all without ever having to quit your job or leave the comfort of your living room. AND for about one fifth the cost of attending a campus based school.

Through the knowledge you will acquire in this course you will be able to completely understand how to repair and customize pistols, revolvers, rifles, shotguns, and rimfires.

This is our promise to you; when you have finished the AGI Professional Gunsmithing Course you will be able to pick up any firearm, even one you have never seen before, determine what type of system it uses, and with that knowledge, be able to analyze the problem and make the appropriate repair.

We teach you how all the systems work, so the mystery and confusion will be gone. You will actually understand what the problem is and why you are fixing it in a particular way. You will have become a Real Gunsmith.

NO OTHER SCHOOL, CAMPUS BASED OR OTHERWISE, OFFERS THIS LEVEL OF INSTRUCTION.

Serious students graduating from campus based gunsmithing schools have been enrolling in our program because "they didn't teach me that!" Why is that the case? . . . because only AGI teaches you step-by-step how all the major firearm systems work & we are the only gunsmithing school with . . .

SENIOR INSTRUCTOR MASTER GUNSMITH BOB DUNLAP!

In addition, because the instruction is delivered step-by-step on video, the instruction is consistent and systematic. The entire course is completely indexed, so you can watch any section as many times as you want or need to.

YOU CAN'T FIX IT UNLESS YOU UNDERSTAND HOW IT WORKS! That is why our course is a complete Design, Function, and Repair course. The way we show and describe to you how the firearms mechanisms work totally illuminates the subject. The fog and mystery are removed.

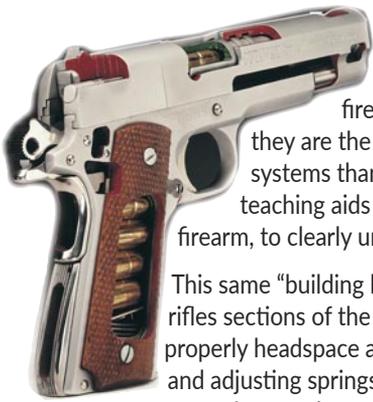

You will now know and possess the how and why of firearm design and function and be able to understand how to make the appropriate repair. No other gunsmithing course provides this teaching method or experience.

BOB DUNLAP HAS THE UNIQUE ABILITY TO MAKE COMPLEX CONCEPTS EASY TO UNDERSTAND.

This unique teaching style greatly compresses the time it takes to become a professional gunsmith. Bob's exclusive teaching system uses one section to build on the next.

For example in the handgun section, we spend 35 plus hours teaching you how all the various models and systems work. You begin by learning in comprehensive detail about "locked breech single action automatic pistols that use a link system" like the 1911 .45 Auto.

Once you fully understand how those type of mechanisms work, we then focus on teaching you the differences between that and the cam lock system (Browning Hi-Power, Glock, and

Learn How To Make Money Gunsmithing - FAST!

others) and so on. This provides new information on each model or major variation of firearm, building on a foundation, and saving you time by not repeating every detail where they are the same. Therefore, we are able to cover many, many, many times the number of guns and systems than any other course ever offered. In addition we have created cutaway guns to use as teaching aids for many of the models we cover. This provides you with a unique look “inside” the firearm, to clearly understand how everything works together.

This same “building block” teaching method is continued throughout the shotgun, .22 rimfire and centerfire rifles sections of the course. You will also learn many important elements of gunsmithing including; how-to properly headspace a firearm and why, firing pin shape and design, sear, hammer and trigger systems, balancing and adjusting springs, accurizing, barrel replacement and alignment, frame repairs and straightening, timing, feed systems, and so much more.

WOULD YOU LIKE TO BECOME A GUNSMITH AT A FRACTION OF THE COST OF A CAMPUS BASED GUNSMITHING PROGRAM?

If you are like most of our students, you already have a career and family and can't afford to go to a campus based school and spend \$30,000 or more per year, plus living expenses, lost income, and two to three years of full-time commitment. This could total \$50,000 or a lot more!!

Even then, many graduates of other schools have told us they still feel they need our Design, Function, and Repair courses, *because they weren't taught* complete Design, Function, and Repair. They enroll with us to complete their education! They also use our courses as a *Master Reference Library on Video*, which frequently helps them get out of a bind. In addition, our courses cover many subjects in better and clearer detail than you would receive as a student at a brick and mortar school. Plus, the American Gunsmithing Institute covers many things that are just not taught in gunsmithing schools at all—like how to be successful in the business of gunsmithing. We also teach you real world benchwork short cuts, tricks, tips, and techniques.

ALL OF THE ADVANTAGES OF A CAMPUS BASED COURSE, BUT FASTER AND WITH THE ABILITY TO REVIEW INFORMATION ANYTIME YOU WANT. We designed the American Gunsmithing Institute's Professional Gunsmithing Course on video to give you the advantages of a campus based program with none of the disadvantages. In fact, many of our students say our video based course is better because they can “replay” the instructor anytime a difficult project comes in. In fact, researchers say we retain less than 12% of what we learn in a classroom. That's why we've designed our course to be sure every step is clearly demonstrated and rapidly available for your review when needed.

WE WON'T WASTE YOUR TIME . . . STUDY AT YOUR OWN PACE. In a classroom setting, you usually only get 20 to 30 minutes of solid instruction per hour, at best. This course is solid information. No wasted time. On top of that, you can see the details and close-ups we show you, which are not usually seen in a classroom.

We remove all of those learning barriers. With the American Gunsmithing Institute's courses you move at your own pace with the ability to review at anytime. There is no time limit to complete the course. **And, because the entire course is taught on video, note taking is not required, allowing you to focus on the instruction.**

The American Gunsmithing Institute (AGI) is where you will learn real gunsmithing. With a curriculum focused on firearms Design, Function, and Repair training, we ensure you have the necessary foundational knowledge you need to build your professional gunsmithing business.

How far will you take your new gunsmithing career? Just turn the page . . .

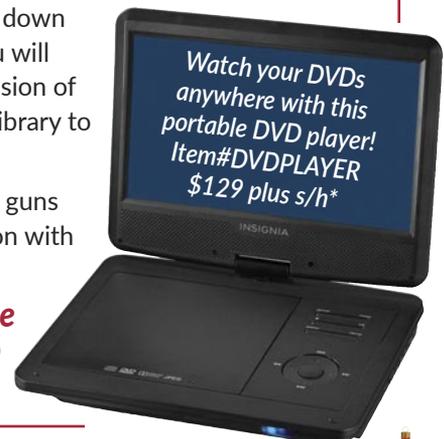

FREE Portable Shop DVD Player with Screen with any paid in full Professional Course Enrollment on DVD!

YouTube is already blocking gunsmithing content. These are dangerous times - protect yourself by owning this how to information on DVD so you can have it available anytime you want or need it!

This player runs off of regular electricity **or battery power for off grid use**. It's ideal for use in your shop. If they ever cut us off, over regulate us, or shut down our private web channel, you will at least have physical possession of these DVDs in your private library to refer to.

Be self reliant and keep your guns in optimal operating condition with enhanced accuracy.

These DVDs will become priceless so you need to ACT NOW!

AGI PROFESSIONAL GUNSMITHING **LEVEL ONE** COURSE

THE **CORE** AGI DESIGN, FUNCTION and REPAIR TRAINING COURSE!

The AGI Certified Professional Gunsmithing Level One Course is **EQUAL** to a TWO YEAR TRADE SCHOOL that costs as much as \$50,000 PLUS living expenses. **SAVE THOUSANDS** by studying from home!

The AGI Level One Course consists of **175 hours of Design, Function, and Repair instruction** divided into four major sections: handguns, shotguns, rifles, and rimfires.

The course starts you off with a five hour introduction to the world of gunsmithing learning about; special gunsmithing tools and how to use them, filing and stoning techniques, proper use of hand tools, firearms parts, proper terminology and descriptions, locking systems, action types, feed mechanisms, basic ballistics, cartridges and powders, different types and pressures, cartridge evolution, primer and bullet types, and so much more.

Now you are prepared to learn the Design, Function, and Repair of pistols, revolvers, rifles, shotguns, and rimfires. Bob's exclusive teaching system uses one section to build on the next. This same "building block" teaching method is continued throughout the entire course.

DON'T BE A "PARTS SWAPPER"

It is our belief that you can't "fix it" unless you really understand how "it" works. Many so called "gunsmiths" simply throw new parts at a problem until they hope it is fixed. We teach the why and the how. When you repair a gun, you will know you really fixed it.

COMPLETE TESTING AND CERTIFICATION

As you complete the introduction to gunsmithing and each of the four sections you will take a written multi-choice exam to test your knowledge. When you pass you will receive a personalized certificate for that portion of

the course. A certificate is given for each section. This certificate is more than a badge of honor. With it, many companies will allow our graduates access to restricted parts.

Included in the 175 hour CORE AGI Certified Professional Gunsmithing Level One Course:

- Introduction to Professional Gunsmithing - 5 hours
- Handgun - Pistol & Revolver Design, Function, & Repair - 35 hours
- Shotgun Design, Function, and Repair - 41 hours

AGI PROFESSIONAL GUNSMITHING LEVEL TWO COURSE

When you enroll in the Advanced Level Two course you will expand your knowledge and become a more competent gunsmith with the ability to work faster and provide more services.

You will learn how to operate a lathe and a mill and how to rebarrel, customize, & refinish firearms.

IN THE LEVEL TWO COURSE YOU GET EVERYTHING INCLUDED IN THE LEVEL ONE COURSE PLUS MORE!

Included in the 255 hour AGI Certified Professional Gunsmithing Level Two Course:

- AGI Professional Gunsmithing Level One Course - 175 hrs
- AGI Certified Machine Shop Course:
Lathe, Mill, General - 30 hours
- Custom Barreling Bolt Action Rifles Course - 2 hours
- Selecting, Understanding, and Buying Rifle and Pistol Scopes Course - 2 hours
- Building the Custom Mauser Rifle Course - 8 hours
- AGI Certified Cowboy Action Armorer's Course - 12 hours
- Professional Metal Refinishing & Hot Caustic Bluing Course - 4 hours
- Advanced Trigger Jobs and Systems - 8 hours
- Classic Slow Rust and Nitre Bluing - 3.5 hours
- Pillar Bedding for Accuracy - 2 hours
- The Art of Making Flat Springs - 1 hr
- How to Make Coil Springs - 1 hour
- How to Case Harden Metal Parts - 1 hr
- How to Heat Treat Carbon Steel - 1 hr
- Heat Treat Temperature Guide for Carbon Steel
- Certificate for one week of hands-on in-the-classroom training with AGI Instructors
- "A DAY AT THE BENCH WITH BOB DUNLAP" - 4 hours
Learn by the side of the Master with this course. What if you could spend a day at the bench looking over a Master Gunsmith's shoulder as he explains, not only what he is doing, but also what he is thinking as he works through a series of real repairs.

Bob talks about his thought process, how to diagnose problems and ways to make the fastest repairs. Bob also shares with you his philosophy on setting up your shop and how to move efficiently. This is 4 1/2 hours of additional video packed with exclusive insider information. This course will take your professionalism to the next level.

And, to expand your gunsmithing knowledge and ability to make repairs, the AGI Level Two Professional Course also teaches you the next set of skills you should learn: general machine shop and how to operate a mill and lathe.

In this course you'll learn how to completely set up and operate the lathe, vertical mill and a host of other shop equipment.

Master Riflesmith & Machinist Darrell Holland will instruct you in everything you need to know to be able to walk up to any one of these machines and start making parts. You will acquire the skills of a master machinist using this course. **Go to page 12**

to get all the details of what the Machine Shop Course covers. There is too much to list here. **This is an extremely valuable addition to any gunsmith's set of skills.**

AGI PROFESSIONAL GUNSMITHING **MASTER LEVEL** COURSE

Our most popular training level! 363 hours of Design, Function, and Repair instruction!

IN THE MASTER LEVEL COURSE YOU GET EVERYTHING INCLUDED IN THE LEVEL 1 & 2 COURSES PLUS MORE!

This is the course a majority of our students choose to enroll in! It will provide you with the knowledge and additional skill sets, including machining and welding, that will enable you to advance your career further.

By watching video instruction you can become an AGI Certified Professional Gunsmith in months, without having to give up your current income and without having to move and pay \$20,000 or more a year in tuition for 2 - 3 years, plus living expenses. ***You could begin making money in as little as 90 days!***

Do you want to learn how to make money repairing and customizing guns? This is your opportunity to really learn the trade and get certified as an in demand gunsmith, while reaping all the benefits of owning your own recession proof business doing what you love!

The Master Level course is intended to put you on the Fast Track to success. Most people these days learn the fastest by seeing and hearing. It takes too long to read and visualize a subject as intricate as gunsmithing. And, it is almost impossible to memorize all of the idiosyncrasies of the hundreds of different makes and models on the market. We will show you and tell you everything you need to know and you will have it available to review at anytime on DVD throughout your gunsmithing career.

You also get membership in the Gunsmithing Club of America which includes GCA's monthly GunTech Video Magazine, monthly GunTech newsletter, monthly LIVE webcast, industry discounts, and members only website with access to hundreds of hours of firearms information and instruction immediately, along with technical support from Master Gunsmiths! **You will quickly appreciate the benefits membership in the Gunsmithing Club of America gives you.**

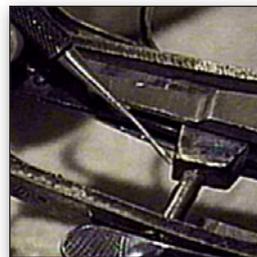

You will also receive additional training on how to be successful not only as a gunsmith but in the gunsmithing business - THIS IS AN ABSOLUTE NECESSITY in today's economy!

Here's everything included in the 363 hour AGI Certified Professional Gunsmithing Master Level Course:

- Introduction to Professional Gunsmithing - 5 hours
- Handgun - Pistol & Revolver Design, Function, & Repair - 35 hours
- Shotgun Design, Function, and Repair - 41 hours
- Rimfire Design, Function, and Repair - 27 hours
- Rifle Design, Function, and Repair - 44 hours
- The Complete History of Smith & Wesson - 3.5 hours
- The Money Makers - 4 hours
- Buying & Collecting Used Guns Without Getting Burned - 2 hrs

All Four Levels of the AGI Professional Gunsmithing Course include 1 Year of Membership in the Gunsmithing Club of America!

How to Set Up and Operate a Lathe and Mill Like a Master Gunsmith

*The most comprehensive and easy to understand instruction ever offered on the proper set up and use of the lathe, mill, and machine shop equipment - GUARANTEED! **You can acquire the knowledge to become a machinist in a matter of hours!***

Is it really possible? Can you learn how to operate a lathe by just watching our courses? **Yes!** In fact, it will only take a few hours before you can start turning out your first quality parts. Instructor Darrell Holland breaks down the information into its simplest components. Each technique he teaches prepares you for the next skill level.

Become an expert on the lathe. With our comprehensive course outline, specialized production techniques, and knowledgeable instructors, you will receive detailed instruction you could NEVER get in the classroom. Our course will take you from the most basic machining skills right through the tricks, tips, and techniques of master machinists.

We teach you everything you need to know about the lathe: what to look for if you are buying one, the function of each part of the machine, how to set it up, grinding your own tool bits, complete facing, turning and boring operations including turning precision diameters and tapers, boring holes and turning threads (internal AND external), knurling, finishing, and more.

Darrell does not just show you how to operate the machine, he teaches you the core knowledge required so you really understand what you are doing. How to select the proper materials for the application and calculate turning speeds and feed rates are covered as well as measuring tools and measuring techniques.

Master the Milling Machine. The Milling Course is just as thorough and complete as the Lathe Course. Once

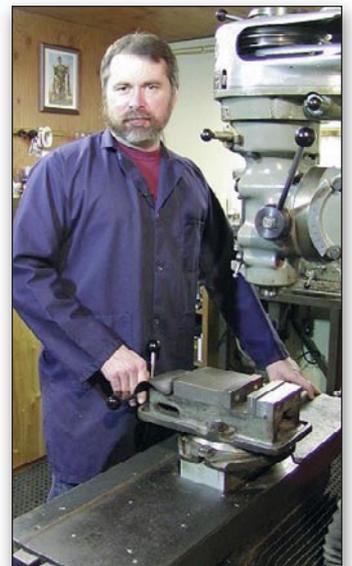

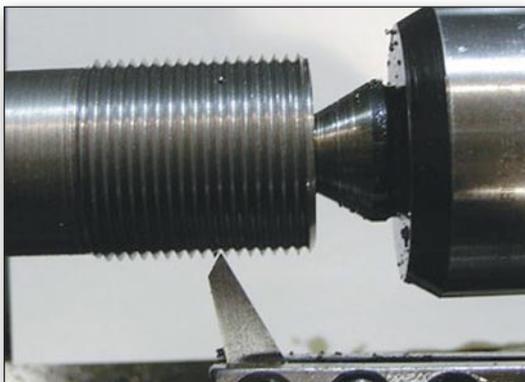

again, Darrell comes through by giving you unique insight into the capabilities and features of the vertical mill.

He tells you exactly what to look for when purchasing a new or used mill as well as tramping the head, fixturing, X,Y, & Z axis movements, locating centers, locating edges, types of cutters, cutting speeds and fluids, chip load, material selection, fly-cutting, climb-cutting, precision hole-drilling, angle cuts and boring.

AND . . . he goes into detail on how to use edge finders, collets, chucks, clamping tools, digital readouts, measuring tools, specialty cutters, rotary tables, indexers and much more.

Just knowing the techniques isn't enough. AGI gives you insight into the way a Master Machinist like Darrell thinks. In the section on "Making a Part: Start to Finish," Darrell takes you through the thought process of how you approach making a part.

He shows you how to think through the entire process in your mind before you start the machine & the differences between machining a single part and setting up for a production run. It's the sharing of this kind of knowledge and information that sets us apart from any other course or institute.

Darrell covers (in his usual detail) how to design and set up your shop, buy materials and perform heat treating as well as how to use the belt sander, drill press, blast cabinet, cut-off saw, pedestal grinder, surface grinder and more.

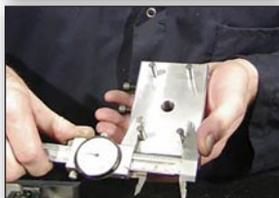

The detailed tricks and techniques he gives you will save you loads of time and make you more money, like how to remove broken screws and sharpen drill bits.

Darrell then rounds out the course by demonstrating the abilities and limitations of the less expensive mill/drill combination machines available. He gives you his own personal recommendations of when and how they can be used effectively and if that wasn't enough . . .

BONUS VIDEOS: Two more instructors will show you how to set up and operate an automotive cylinder boring machine and an automotive brake lathe. Armed with this exclusive information you could start doing contract work for a local garage.

Pass the Ultimate Test! So you can prove you have learned the material completely, we have two levels of optional testing. The first level test is Machine Shop Theory. We will provide you with a multiple choice test that you complete online. If you pass, we will provide you with a personalized certificate in Machine Shop Theory.

The next level of testing is a chance for you to demonstrate your new machining skills. When we send you the course it includes the blueprints needed for you to machine a few pre-selected parts.

This is your own personal Fire Walk. A true test of your skills. If you pass, you will be issued a certificate of completion showing that you have met our high standards, which will read "Machinist in Practical Applications" with your name on it.

THE MORE TRAINING YOU GET - THE MORE COOL FREE STUFF YOU GET!

See page three for details!

"The Lathe Course was superb, and since the Milling Course is even better, I am at a loss for a term of recognition higher than superb. I learned more tricks and insights from these courses than 35 years of hands-on has taught me. Just his tips for tramming in the head quickly and easily were worth the cost of the course to me.

Darrell is not only a master machinist and gunsmith, but a natural instructor as well. Thanks for another great course!"
Steve Bird Sr.,
Failure Analysis Engineer,
San Jose, CA

"I have watched the entire course 4 times. As usual with AGI, the quality of the instruction is first rate.

Darrell Holland is a machinist who not only knows his subject, but is also able to present the material in an interesting and captivating way for the student machinist.

I found the additional videos dealing with automotive machining to be an unexpected, but appreciated bonus."
Glendall H. Epperson,
Epperson Gunsmithing

Start Earning Your Certification TODAY!

The FASTEST way to learn how to Weld!

Welding is an invaluable skill! Learn how to make professional looking welds in minutes! Be able to do all types of welding and build or repair anything.

Having the ability to weld can be the difference between being a successful gunsmith or not. Many times when you are gunsmithing you will encounter a firearm that has a worn or broken part which is either expensive, hard to get, or even no longer available. Knowing how to repair an existing part, or being able to create a new one by welding, is often your best solution.

AGI's Complete Welding Course is the most comprehensive, video-based, welding course ever produced. This 22 hour course covers everything from history to set-up, to safety, to how to make the perfect weld. There is no other course that goes into this amount of depth and takes you right up into the molten metal so that you can SEE how a weld is made. It enables you to understand for the first time how to control the molten puddle, by showing you close-ups from just inches away. **You will feel like you are right in the middle of the Molten Puddle!**

History: The course begins with the history of welding which actually started at the end of the Stone Age. Your instructor, Bob Rizzetto takes you through this fascinating history in order to show you the basics of what welding actually is.

Safety: Welding offers too many ways to injure yourself for us to overlook safety. We cover all the safety gear and procedures in our usual detail so you can use the right safety gear and know the correct procedures to protect yourself and others in every situation.

Gas Welding: We use gas welding as the foundation for the course because with gas welding it's easier to see and control the weld puddle and the gas welding process builds the hand/eye coordination necessary to become proficient at any type of welding.

Mr. Rizzetto shows you the puddle, the heart of all welding, no matter what type of equipment is used. He teaches you everything you need to know in order to make and control the weld puddle. We don't just show you the correct way to weld, we also demonstrate what happens when the puddle is too hot, too cold, moves too fast or too slow, and much more.

Bob shows you: how to tack your work pieces, the basic types of weld joints, the four welding positions (flat, horizontal, vertical and overhead), rods, tips and how to make the proper rod/tip selection based on the thickness of the material, type of metal, etc., and how to complete a weld using both single and multiple passes. By the time we wrap up gas welding we have covered all the basics you need in order to become proficient at all types of welding.

Gas Cutting: In this section you learn how to use the gas rig to cut metal. Thick, thin, round, square, you name it, Bob shows you how to cut it properly. We cover all the details of equipment selection and set up as well as the rules you must follow in order to achieve a proper cut. We demonstrate add-on equipment that lets you make cleaner,

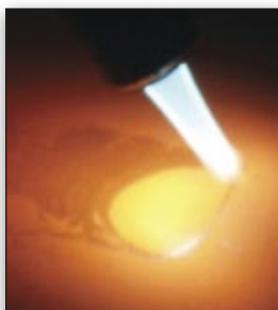

AGI Instructor, Master Welder Bob Rizzetto

faster cuts, circular cuts and more. And, we show you how to use special tips to "gouge" and "scarf" away material, remove rivets and brackets, and even remove a nut from a bolt without damaging the bolt.

Plasma Cutting: Once you've mastered cutting with gas, we show you the set-up and operation of a plasma cutter. It is one amazing tool not just because it is fast and clean, but because you can also cut non-ferrous metals like aluminum, stainless, copper, brass, etc. Bob covers all the particulars for making good cuts with a plasma machine.

MIG Welding: In order to lay a good foundation for welding with electricity, Bob goes over the basics of electricity, the electric circuit, and safety. Bob takes you step-by-step through all the details of equipment set up and operation. From assembling the machine and loading wire, to cleaning and replacing nozzles, tips and more, we cover it all.

Then we begin teaching you how to control the equipment settings and the puddle in order to be able to tack

HAVING THIS KNOWLEDGE WILL BRING ADDITIONAL REVENUE INTO YOUR SHOP!

parts and weld thin or thick materials using single and multiple passes. Bob takes you through the MIG welding process using both solid and fluxcore wire.

Arc Welding: Since you've learned the basics with gas welding and moved on to hone those skills with MIG welding, you are ready to tackle the challenges offered by traditional "stick" welding. Again, we show all types of Arc welding equipment as well as how to properly set up and operate it. Nothing is left out.

Bob teaches you all about rods, rod storage, flux coatings, and shows you how to choose the correct rod for each situation. Bob takes you close up to show you how the weld puddle looks and acts with flux covering it. We cover the proper techniques for removing slag and grinding welds to prepare them for inspection or multiple passes and teach you how to find and properly repair, porous welds.

As Bob teaches all of this he continues to demonstrate the different types of weld joints and positions and to give you tips and pointers that will help you build your skills faster and to the highest level possible.

TIG Welding: Once you've learned how to arc weld, you are ready for TIG welding. Part of the finesse of TIG welding is learning how to use the features and controls of the TIG machine to enhance the quality and speed of your welds. Bob unravels the confusion. TIG welding not only allows you to weld non-ferrous metals such as aluminum and stainless steel, it also allows you to make extremely fine welds on very thin metals or repair very small parts by rejoining them.

Bob teaches you the systems used to "grade" the metals according to hardness, tensile strength, etc. so that you are able to make the right choice when choosing metals for a project or correctly identify what type of metal a particular workpiece is made from before you weld on it.

Welding Small Parts: If that isn't enough, we have a special section on TIG welding that focuses solely on welding small parts for gunsmithing. Although the parts and situations we demonstrate are gunsmithing related, this section is invaluable to anyone who needs to construct, modify, or repair tiny parts of any kind.

Welding Symbols: In this section Bob covers the AWS Welding Symbol System, what each part represents and how to read it. He also teaches you the graphic symbols used in prints and drawings to represent the types of joints, welds and processes. Understanding these symbols and the AWS Symbol System and all its parts is an important requirement in the process of becoming a AWS certified welder.

Shop Tour: Next, Mr. Rizzetto takes you on a tour of an actual welding shop and shows you the layout of equipment and work areas as well as the specific pieces of equipment and how each is used in this ever changing environment.

Welding Projects: In this section Bob lets you put your skills into use building actual projects that will be invaluable to you as you begin using your newfound welding skills. As he takes you through each project step-by-step, everything you have learned in the course is put into practice so you can make the final connection between the skills and their applications. In the end, you come away with new skills that will last a lifetime and a useful welding bench with accessories!

"I received the welding course as part of the Master Gunsmithing Course. I decide to review this first because I have an extensive background in welding. I took classes starting in high school, through college, and have been doing welding off and on ever since. I own my own business and I have fabricated many items for my business instead of purchasing similar items from the factory, etc. I have used my skills to make necessary repairs on equipment, etc. throughout the last 25 years. I thought I knew a lot about welding but I quickly realized I didn't.

What an excellent course! I wish I'd had this years ago. Even though I have experience, your course taught me things that will help me tremendously in every facet of welding. I would highly recommend this course to all those who are serious about learning proper welding procedures."

Ronald Stephenson, Phillipsburg, MT

~~~~~

*"This course has been a very smart purchase and I would suggest that anyone who wants to learn how to weld get this course! It will teach you all that you need to know about how to do the job right."*

*Chris Marks*

# AGI is the #1 highest rated Gunsmithing School in the nation, RECOGNIZED FOR OUTSTANDING CUSTOMER SATISFACTION!

Rated by what truly matters - actual online reviews  
on Google from AGI Gunsmithing Students.

*"I am writing to you today so you know exactly how successful your program actually is. As you already know I have opened my own gun store and gunsmithing shop because of your video program. In addition to that I was recently hired by the Winchester Police Dept. to maintenance their service pistols. I was honored they had the confidence in me to take care of such a vital tool for their job. Don't know what I would have done without AGI! Thank You Gene!!"*

Vinny Cedrone, Shawsheen Firearms

~~~~~

"Could not be more happy with my decision to go with AGI for my education. I started to make money earlier than expected just after starting and acquiring my FFL following the advice from Gene, and have had many more options open up. Do not hesitate to go with them, it is a mistake if you wait and you are losing potential income." Charles Moody

~~~~~

*"AGI is a great way to get into gunsmithing the right way. The videos give you the knowledge you need to start your own gunsmithing business like I have.*

*Going on seven years of success."*

David Borum, D&W Gunsmithing, Maryville, TN

~~~~~

"There isn't a better school out there. Opened my shop about six months ago after completing my Master Gunsmith. Since then I earned my Appraiser Certificate. Business is steadily growing as both a gunsmith and an appraiser. Going to send my son-in-law through the masters course.

Am currently the gunsmith for a police department and indoor gun range. Have had over 100 firearms come into the shop and all were different models, rifles, pistols, shotguns.

Haven't had a problem diagnosing, repairing, disassembling or reassembling any of them thanks to the education received from AGI. The only regret is not pulling the trigger and taking these courses earlier. Planning on taking more courses in the near future to enhance my portfolio." Allan C.

~~~~~

*"I started AGI a couple of years ago and now I can see myself realizing my dream as a real Gunsmith. It's not easy at first, but it's worth it. This isn't a spoon fed adult day care like my previous years in college, it helps to be a self starter. My only regret is that I waited this long to get the pro course and now I can see myself, not hoping, but knowing it will happen." David Orosco*

Learn How To Quickly Solve Feeding & Ejection Problems Quickly!

Extractors & Ejectors: An *ADVANCED* AGI Gunsmithing Course for *Professional Gunsmiths*

Extractors and ejectors are a critical part in any firearm design. In this Advanced Course, Master Gunsmith Ken Brooks, will teach you in depth the design, function, and repair of extractors and ejectors, as well as special modifications to these parts.

Ken also extensively covers extractor and ejector "Rules," as well as some of the exceptions to those rules. After ammunition and feeding devices (magazines), an estimated 80 to 90 percent of all feeding and ejection problems can be directly related to the extractor or ejector, thus making the proper fix of these parts a critical component of a firearm's reliability. Reliability in a firearm is "job number one" because people rely on firearms to save their lives and put meat in the freezer.

Keep in mind that this course will teach you about the systems of extraction and ejection and not about any specific model of firearm. This will allow the gunsmith to develop the ability to troubleshoot and diagnose any type of firearm's extraction and ejection design without ever having seen it before.

We have concentrated this lifetime's worth of knowledge down into an instructional system that will save you years of frustration and failure. There are simply too many different gun designs that have been used throughout the years to study each one individually. Learning the major extraction and ejection "systems," which are critical for proper operation, used in a variety of firearm types, is much more practical in the long run.

Overall break-down of the course:

DVD #1 covers extractors basic theory, the rules, and how to fit them.

DVD #2 covers extractors of various styles, exceptions to the extractor rules, and extractors and ejectors for revolvers,

DVD #3 covers ejectors basics, ejectors of various styles, and how to fabricate ejectors, as well as the course wrap up.

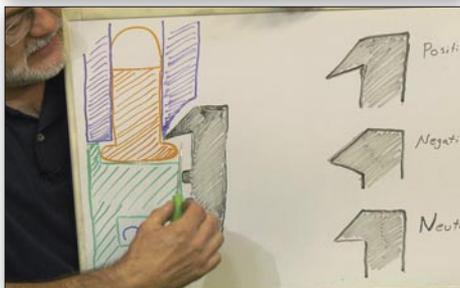

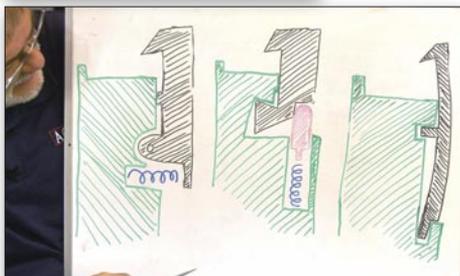

This course utilizes extreme close-up views of parts and white board drawings that allow the instructor to quickly and concisely drive home a point or lesson. In addition to this material, we will also show you some actual modifications to extractors, which will show how a little bit of work and understanding goes a long way to correct some of the "mysteries" found in both extraction and ejection systems.

Extractors & Ejectors: An Advanced AGI Gunsmithing Course for Professional Gunsmiths on DVD. Includes a detailed workbook of notes.

SURVIVAL Gunsmithing Course

What will you do when your guns don't work in a Life or Death Survival Situation?!

AGI's Survival Gunsmithing Course teaches you what you need to know NOW!

Adjusting and repairing sights

Removing a broken screw

What should go into your Survival Gunsmithing Tool Kit

Proper firearms maintenance with simple materials

What is Survival Gunsmithing? Well, just like most other aspects of survival, it's primarily about the mindset, the skill set and the preparations you need to make **BEFORE** you find yourself in a survival situation.

The training we provide in AGI's Survival Gunsmithing Course will help you develop the proper mindset needed for survival. We will show you what you need to gather now and teach you the skills you need to learn, not just to survive, but to **THRIVE** and make the **MOST** out of any survival situation.

The **KEY** to doing this it is to obtain the knowledge necessary for your preparation and planning. This course provides you with that knowledge so you will be prepared.

You must learn this before you find yourself in a survival situation!

This information applies to just about any survival situation involving firearms. From a hunting trip gone bad, a plane gone down in the remote bush, an economic crash, or an extreme "grid down" situation.

You will learn:

- The survival gunsmith mindset
- Five key things you need to survive
- Field expedient repairs to keep your guns functional
- What tools you need
- The materials you need to gather now
- What parts are most vulnerable to breakage or need for replacement
- What skills you need to acquire to be your group's gunsmith
- Cleaning and maintenance tricks and shortcuts
- The supplies you need to gather now while you still can
- Surprising items to add to your kit that could fix your gun in a pinch
- How to reload ammo in the field
- Repairing broken stocks
- What supplies to cache with your firearms
- How to prevent your guns from being destroyed by rust
- Caching techniques that will keep your guns from being discovered

Over ten hours of important information that you need!

Plus:

- Building a cache that will last decades
- Repairing a damaged muzzle crown
- How to quickly re-zero your rifle

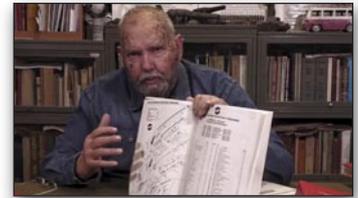

YOU Need This Course! Get it NOW before it's too late!

- How to remove a stuck or broken screw
- Best lubricants to use to preserve your guns and what ones to avoid
- Understanding and fitting extractors and ejectors, the cause of 80% of feeding problems.
- Criteria for choosing the best survival firearms
- Instruction from Master Gunsmithing Instructors of the American Gunsmithing Institute
- Critical firing pin shape and how to repair them
- How to rapidly diagnose firearm problems so you understand the "next steps"
- "Reading" fired brass to understand what the case is telling you about the health of the firearm.
- What are Armorer's Courses and why you should have one for each firearm you will use in a survival situation.
- The critical tools you need for the gun you will use in the wilderness
- Cleaning techniques
- Why being a Certified Gunsmith is a real asset and where you can get more training.
- How welding and machining can add to your economic survival skill set
- Cartridge and caliber conversion units
- Building up your home or portable gunsmithing shop
- Removing stuck cartridge cases from chambers
- How and why to headspace a firearm.
- The one portable power tool worth its weight in gold for survival gunsmithing
- The second most important gunsmithing power tool and how it use it to shape and fit parts
- A review from an African Safari on the tools we bring with us to keep our guns working on the Dark Continent
- Building your backpack gun shop

*PUT THIS IN YOUR STOCKING
AND BE READY!*

The Spare Parts You Need

Offline Resources

Bonus: Survival Training and Tools

The Bug-out Gunshop

Vacuum Packing Guns For Caching

Bonus Material:

- A one hour introductory video lesson on how to become an AGI Certified Gunsmith
- Learn about the world's best manual fire starter. You need one of these!
- Field bags and what they should contain

Become an AGI Certified Law Enforcement Armorer!

You do NOT have to be a sworn officer to take this course and GET CERTIFIED!

This certified course covers all of the commonly used law enforcement handguns, shotguns, and patrol rifles.

Due to budget priorities, most of the thousands of local Law Enforcement agencies, both Sheriff and Police departments, do not have a full time civilian or dedicated sworn armorer. They either use a local gunsmith, an existing deputy or officer, or send their firearms back to the factory for service when needed.

Because of this, we received hundreds of requests for a course that would meet the needs of both sworn officers and individuals who work on law enforcement firearms or would like to. Over the years, a number of individual law enforcement officers, gunsmiths, and agencies approached AGI asking how they could get certified as armorers on the specific firearms their department issues.

In the past they have had to travel around the country to numerous different factory schools at great expense and they still didn't have the course information readily available to review when they needed it. We are always looking for ways to serve law enforcement and the firearms community and are pleased to be able to offer this comprehensive course. As always, we at AGI listened and we responded.

AGI was able to provide the perfect solution. AGI has incorporated sixteen AGI Armorer's Courses into a single course along with testing and certification to create this exclusive AGI Certified Law Enforcement Armorer's Course.

In this comprehensive course Master Gunsmiths Bob Dunlap, Ken Brooks, and Mark Foster provide a clear visual demonstration of the intricate internal workings of the firearm, teaching you how each part is intended to function using a cutaway firearm. They then guide you through the complete step-by-step disassembly, cleaning, and reassembly process.

This AGI Certified Course qualifies you to be that armorer and covers many of the commonly used law enforcement handguns, shotguns, and patrol rifles.

Guns covered in detail include:

- H&K MP5 SMG
- Glock Pistols
- Colt 1911
- S&W M&P
- SIG Pistols
- Springfield XD
- Beretta 92
- H&K USP
- Ruger® Mini-14®
- S&W Revolvers
- AR-15 Rifles
- SIG Sauer P320
- Mossberg 500 Series Shotguns
- Remington 870 Shotguns
- S&W Auto Pistols; 1st, 2nd & 3rd Gen
- Ruger® Double Action Revolvers

To attend just one factory armorer school would cost you hundreds of dollars, plus days of time and travel expenses. This entire course is equal to attending 16 (sixteen!) factory schools and is available to review as many times as you want! PLUS, you can watch and learn at home in your spare time. Your knowledge of these firearms and confidence in maintaining them will reach a new level. Your peers will respect your right to wear the AGI Certified Law Enforcement Armorer patch.

Not only can you make a steady income, but think of how being Law Enforcement's expert and "Go To" gunsmith will build your reputation, bringing in even

more business. **Here's how enrolling in the AGI Certified Professional Gunsmithing Course changed Gary Hutchins' life for the better:**

"A year ago I started my own business as a gunsmith with a bit of a twist. I took what little savings I had and invested it in my future. AGI was just the right program at the right time for me. I've sat in classes and taken notes, but I was never able to get the instructor to repeat a class as many times as I needed in order to get everything he was trying to teach me. Now, if I don't fully understand something in the course, or if I missed a point, I just hit rewind and rewatch that part until I get it.

My shop is in an old bread truck. My focus is on going to the need rather than waiting for it to come to me! I service firearms for the local law enforcement agencies and the work is done on site. The firearms never leave their control, and the maintenance is done by a professional. I never dreamed this idea would be received with such excitement by the police departments I work with. One department even set up a regular account in their budget to pay for my services.

Having used firearms for pleasure and professionally all my life, I feel like a kid in a toy store. I've never had so much fun in my life! And I get paid for it, too!!!

Gary Hutchins, Diamond, MO

Why AGI Created Armorer's Courses for Your Firearms . . .

Way back in 1993 when the American Gunsmithing Institute was first established, we were only teaching Professional Gunsmithing Courses focusing on our exclusive firearms Design, Function, and Repair training system, along with how to do advanced customizing of guns.

We looked at what was available in the marketplace and realized that no one else was teaching how the various individual firearms operated internally. Further, while there were some basic instructions available in field stripping various models of guns, with the exception of the military and a few firearm manufacturers in their Armorer Schools, there wasn't anyone teaching complete disassembly/reassembly down to the last part.

After determining there was a critical need for this level of information we decided on a Armorer's Course format that would provide a greater level of knowledge to the firearm owner than was ever previously available. AGI started producing full length Armorer's Course videos, that are typically 90 minutes to two hours in length and teach the internal operations of the firearms and the systems they use. They clearly show and demonstrate those systems with cut-away guns that were purchased and machined exclusively for that purpose.

We invested years and millions of dollars producing these courses. The result is the first wide scale opportunity for people to deeply understand and appreciate their firearms. One of the most common comments we receive is "Gee, I thought I knew a lot about guns until I started watching AGI's video courses!"

Over the years AGI has created 68 different Armorer's Courses that cover popular models and their variations and are applicable to a combined 200 million plus guns.

If you actually want to UNDERSTAND the internal operating systems of your firearms AND be able to completely disassemble and reassemble your firearms, then you really need to watch and study these AGI Armorer's Courses.

Our Armorer's Courses are now available to stream online and are still available on DVD for those who want a "hard copy" to preserve this knowledge if it becomes no longer available online one day, as when they were banned by YouTube.

This is still an excellent entry point into gunsmithing as a hobby or a profession. To order yours or stream them online go to: www.AmericanGunsmith.com

Now Available - Online Stream

AGI Armorer's Courses - Training in Design, Become an Expert on every gun you own!

Learn how to completely disassemble, maintain, clean, and reassemble your guns with total confidence using these video classes from AGI! With AGI Armorer's Courses you will understand how your firearm functions and is intended to work!

- You will learn **detailed step-by-step** Design, Function, and Operation of your specific model.
- AGI Armorer's Courses use **cut-away guns to provide close-up views inside the firearms.**
- Learn how to completely disassemble and reassemble ALL your guns with confidence.
- **Advanced Video Training** by Master Gunsmiths. This is NOT just basic field stripping. **This is information "THEY" don't want you to have.**
- **Training available on DVD or online streaming video!** Have this information available when you need it.

Better than a factory class! With AGI Armorer's Courses you will understand how your firearm functions and is intended to work. AGI Armorer's Courses contain **CRITICAL INFORMATION YOU NEED** with **exclusive close-up views of the inside of the firearms.** Master Gunsmiths Bob Dunlap, Ken Brooks and Mark Foster provide a clear visual demonstration of the intricate internal workings of the firearm, teaching you how each part is intended to function.

They then guide you through the complete step-by-step disassembly, cleaning, and reassembly process. In many of the courses they cover troubleshooting, how to make basic repairs, provide tricks and tips, and show you how to avoid common costly mistakes. Design of the feeding and locking mechanisms, the trigger system, proper ejection, and other functions are also covered in many of the courses.

Each Armorer's Course runs 90 minutes to 2 hours in length, covers the entire "family" of that particular model of firearm, and includes a free printable schematic.

Function, & Maintenance of YOUR Firearms

68 Individual Courses to Choose From!

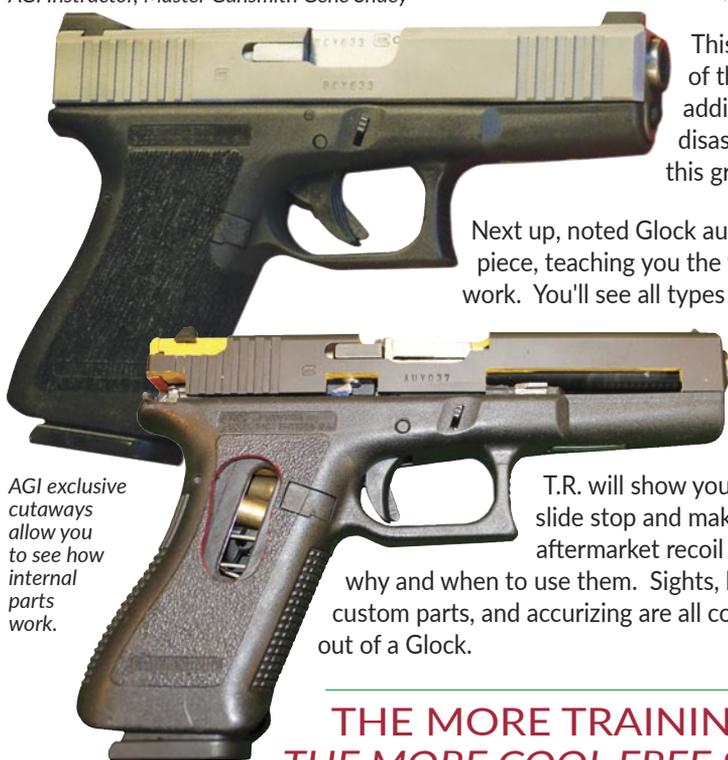

BE AN AGI CERTIFIED GLOCKSMITH!

AGI Instructor, Master Gunsmith Gene Shuey

Even if you have never disassembled a Glock before, after watching and practicing the techniques shown in this course, you will master the Glock pistol and be able to repair and customize it.

Ken Brooks walks you through every step of the complete disassembly and reassembly (D/R) of the Glock down to the very last part in close up detail. Mr. Brooks then uses a rare, original, factory cutaway pistol to reveal the intricate inner workings of this revolutionary pistol design.

AGI exclusive cutaways allow you to see how internal parts work.

This course is applicable to all models and generations of the Glock, including the single stack compacts. In addition to proper maintenance techniques and complete disassembly/reassembly you will also learn how to make this great pistol even more reliable.

Next up, noted Glock authority T.R. Graham takes you into the gun piece by piece, teaching you the tips and tricks that years of experience have shown work. You'll see all types of trigger modifications available by switching parts, using aftermarket parts, and even by modifying the factory originals. How to combine them for different shooters and applications is shown, along with a build up of both a combat and a target trigger.

T.R. will show you how to install an extended mag release and slide stop and make them work even more effectively. He covers aftermarket recoil spring and guide rod combinations, and explains why and when to use them. Sights, barrels, triggers, magazines, accessories, conversions, custom parts, and accurizing are all covered. You will learn how to get the most accuracy out of a Glock.

FREE SHIPPING ON ALL ORDERS!

**THE MORE TRAINING YOU GET -
THE MORE COOL FREE STUFF YOU GET!**

See page three for details!

Master Gunsmith Gene Shuey then teaches you how to customize the Glock by revealing the four areas you can greatly improve on this excellent pistol. There is no doubt the Glock pistol is a reliable workhorse for law enforcement, military, and personal protection. However, there are four areas of the Glock pistol that anyone with the right training and just basic skills can improve: the sights, the barrel (for accuracy and the ability to safely shoot lead bullet reloads), the grip frame (better fit, grip, and reduced felt recoil) and the trigger pull. To get the most out of your Glock you need to know how to address each of these areas.

Mr. Shuey is well known for building extremely high end pistols. He now shares with you everything he has learned from spending thousands of hours working on these guns. Follow along as he shows you numerous different sight options available and helps you make your choice. He selects an aftermarket drop in barrel, installs it, and demonstrates how to test for proper fit as well as polishing the chamber for reliable feeding. He shows you how to enhance the grip and

TAKE GLOCK PISTOLS TO AN INCREDIBLE NEW LEVEL

increase the adhesion of the grip so it won't slip during rapid firing or when your hands are sweaty, wet, or slippery. Gene reveals how to recontour the shape of your grip and enhance the surface texture to create a grip that fits your hand like a glove.

He teaches how to greatly improve the trigger pull by installing a lighter trigger connector, springs, and smoothing and tuning the parts. You will learn how to select and install an approved recoil spring assembly to reduce felt recoil and improve reliability.

IN THE ADVANCED TECHNIQUES SECTION

Mr. Shuey demonstrates installing and modifying a custom slide, how to machine in a sight track, as well as bevel the side and front edges for a striking appearance and smooth, concealed carry. He teaches you how to perform an advanced and comprehensive trigger job that speeds up lock time with a Titanium firing pin, then shows you how to install a Cominoli "1911 style" thumb safety.

He shows and explains the pros and cons of an extensive assortment of slide stops and magazine releases available as both factory and aftermarket parts. On top of all that, he covers finishing options such as hard chrome, DLC, and bluing.

YOU WILL LEARN HOW TO CONSISTENTLY MAKE MONEY BUILDING CUSTOM GLOCKS!

Gene will show you how to create a reusable model specific template to ensure a perfect job each and every time. This is simply a MUST HAVE COURSE for anyone who wants to build Custom Glock.

All the DVDs are indexed to help the user quickly find the information they are looking for. This certified course includes 17 hours of video instruction, a complete set of professional class notes on the Glock pistol with close ups and lists of sources, testing, Glocksmithing Certificate, and the Certified Glocksmith patch to wear on your shop apron or shooting jacket upon completion of your online test.

EXTRA BONUS! An exclusive recording of a one time live classroom course by Gene Shuey on how to do a professional Glock trigger job fast while still getting safe premium results using existing parts. This alone will save you thousands of dollars over time!

BE AN AGI CERTIFIED 1911 PISTOLSMITH!

You can Build Custom 1911s just like this one!

The 1911 is an obvious choice as a personal defense weapon or for building the latest IPSC competition pistols or hi-capacity, compensated "race guns."

Surprisingly, not many people really understand how this locked breech single action auto pistol truly works, let alone be able to properly customize it and still have it work reliably. After studying this course, you will be a 1911 expert.

Over 27 hours of instruction!

As you know, we believe you can't fix or effectively customize a firearm unless you truly understand HOW the firearm is intended to work, so that is where we start. First, Master Gunsmith Ken Brooks completely walks you step-by-step through the process of the complete and total disassembly & reassembly of the 1911 pistol down to the last part, including showing you several variations.

Next, Bob Dunlap explains in extreme detail the complete Design, Function and Repair of the 1911 using a cutaway pistol. By investing the time to learn about feed ramp design, lock-up, loose breech and extractor fit, you will be able to use these techniques to tune your .45 for maximum reliability and performance.

Master Pistolsmith Gene Shuey then shows you the step-by-step process of how to build the same type of high-end, custom 1911 pistols for which he charges over \$5,000 each. He reveals all his insider secrets and shows you how to build the type of 1911 pistol you really want for concealed carry or for competition, including selecting all the various parts and options. Every step is covered; frames, slides, barrels, triggers, sights, grips, and so much more.

Master Gunsmith Gene Shuey has over 40 years experience in shooting and building 1911 style pistols of all types, from compact carry guns to the

most exotic race guns with wild compensators that are used by Grand Master Shooters. He will take you through the entire process, revealing all the tricks he has learned from decades of experience along with some of the upgrades available for your pistol.

No matter whether you are building custom 1911s from the frame up or are modifying existing 1911 style pistols for yourself or your customers, being a 1911 Pistolsmith will enable you to add all the cool features everyone wants and still turn out accurate, reliable pistols with pride!

If you want to be a 1911 Pistolsmith you must be able to troubleshoot these pistols and understand what creates those mysterious malfunctions that drive shooters nuts and how to permanently repair them. Ever wonder why after you have added that latest trick gadget, your .45 isn't quite as reliable as it used to be?

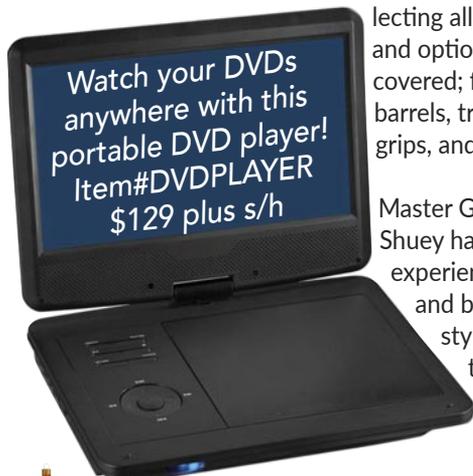

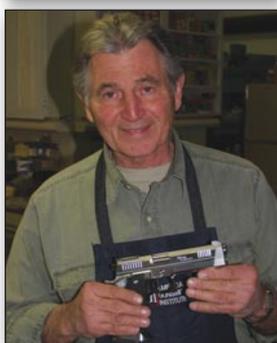

Master Gunsmith Gene Shuey

As originally designed, the 1911 is unbelievably reliable. However, when you or a manufacturer change features, add parts, or vary from the original design in any way, this gun can provide you with some frustrating reliability problems.

To resolve these issues, Gene Shuey will take you through the entire troubleshooting process, using cutaways to simulate and show you what specific types of jams and

**THE MORE TRAINING YOU GET -

See page three for details!

THINK OF ALL THE ADDITIONAL REVENUE HAVING THIS KNOWLEDGE COULD BRING INTO YOUR SHOP!

various malfunctions look like, what causes them, and how to correct or avoid these problems. We have assembled an entire how to Troubleshooting Encyclopedia for the 1911 auto pistol. This is laid out and presented in a logical problem/solution format that is easy to follow and allows you to rapidly find the information you are looking for.

Applicable to all makes, models and calibers, this course is an absolutely mandatory video resource for anyone who owns a 1911 or who is a serious student of this pistol. You will also be able to "sit-in" and watch a class Gene Shuey presented to a group of students on how to do a 1911 trigger job!

Included is a detailed workbook with professional notes on the 1911 which you can use as a reference guide. Once you prove your knowledge by passing the online tests, you will receive a personalized 1911 Pistolsmithing Certificate and 1911 Pistolsmith patch to wear on your shop apron or shooting jacket, proving that you have completed this comprehensive course.

Studying this course will save you a lot of time, painful learning and money. You will also absolutely love learning from Master Shuey. This is, by far, the ultimate instructional course on the 1911 auto pistol ever offered!

Wow! What a course. All my life I've wanted to go to gunsmithing school, but could not take the time off. Now with AGI, I can bring the school to my house.

I learned more with the first video than I did with books, etc., and 20 years of fooling around. I've learned things most gunsmiths don't know.

If you really want to learn gunsmithing and you don't take this course, you're missing out big time.

PS: Your Armorer's Courses are great too!"
Bill Laques, Richmond, CA

"Through Mr. Dunlap's teaching I have learned more about the design and functioning of guns and I am able to understand and retain more information from written sources, because your course has given me a better grasp of the fundamentals.

In my opinion, the best part of this course lies in the fact that the student can see exactly how gunsmithing procedures are performed, and is left with little doubt about what he should do.

I am very pleased to say I have already written about AGI courses on my site and it has long carried my personal endorsement of your curriculum. I regard your courses as essential to anyone who wants to acquire a thorough, systematic knowledge of the design, function and repair of guns.

I recommend it to everyone I know."
Joseph W. Reichert, Albuquerque, NM

BE AN AGI CERTIFIED AR15 RIFLESMITH!

Another Great Additional Revenue Producer For Your Shop!

FREE SHIPPING ON ALL ORDERS!

AGI Instructor,
Master Gunsmith Mark Foster

As an AGI Certified AR15 Riflesmith, you will understand how to select the proper components and fit them to create Purpose Built AR Rifles for Tactical, Competition, Hunting, or Self Defense.

If you don't know the information covered in detail in this course, you can easily waste thousands of dollars on parts that don't work and be totally embarrassed by building rifles that just aren't reliable. This course will take you

from start to finish and you will know everything about these firearms and how to maintain and customize them. Having a rifle that works when you need it to could be the difference between life and death.

Master Gunsmith Ken Brooks will first take you through the complete disassembly and reassembly of the rifle down to the last part so that you will be comfortable with all the parts of the rifle. Master Gunsmith Mark Foster then takes you through a complete understanding of the Design, Function and basic Repair of the AR15 platform.

Understanding step-by-step how the AR15 and its clones function, including how the unique gas system works is critical. Disassembly and reassembly, lubrication, maintenance, feeding, troubleshooting, solutions, and repairs are all explained and shown in eye-opening detail, along with what critical spare parts are needed to keep on hand.

Master Gunsmith Bob Dunlap then goes through the complete process of building up rifles assembled from parts kits from several different manufacturers. He shows you the problems and pitfalls to avoid. He covers parts identification, installing and fitting all the parts, headspacing the barrel, final assembly, test firing, and tuning. Bob teaches you step-by-step how to turn the existing trigger system into a target trigger. He uses oversized mock-ups so you completely understand the critical positive/neutral/negative hammer sear relationships and are able to create a safe, light, and crisp trigger pull.

To be sure which of the myriad of accessories are best for your purpose, you really need to understand what they do, how they work and whether or not they will achieve the desired result. Your instructor in this segment is Master Gunsmith, Retired Sgt. Mark Foster. He has over forty years of gunsmithing experience and is a 30+ year veteran of the Sheriff's

AGI Senior Instructor, Master Gunsmith Bob Dunlap

YOU CAN BUILD THE ULTIMATE AR RIFLE FOR HUNTING, COMPETITION, OR TACTICAL USE!

Department, where he was the Chief Armorer and Training Officer. During that time he built dozens of AR variants for use in different applications and maintained over one hundred ARs used daily by patrol deputies. He was also responsible for the specialized select-fire SWAT Team's tactical M4s.

Mark has seen first hand what works and what doesn't. He has observed how easy it is for operators to spend thousands of dollars on gadgets that in the end don't perform as expected and can even be dangerous. He will help you will avoid those mistakes.

**THE MORE TRAINING YOU GET -
THE MORE COOL FREE STUFF YOU GET!**

See page three for details!

Mark shows and explains to you numerous examples of triggers, grips, optics, lights, rails, barrels, stocks, muzzle brakes, compensators, flash-hiders, sights, handguards, gas systems, and more. For each category he outlines what works well, tells you what to avoid and explains why. His daily field experience combined with his armorer experience working on fellow officers' weapons, gives him inside knowledge on the reliability and functionality of each of these options.

After reviewing the many available accessories thoroughly, Mark will show you how to build a variety of "mission-oriented" ARs and explains what components he chooses for each and why. He goes through the process of tailoring the AR for: CQB, general hunting, SWAT, 3-gun, varmint hunting, home defense, and plinking, just to name a few.

Mark's experience building up AR15 platforms for all different types of uses including target, hunting, and personal protection, combined with his armorer experience working on fellow officers' firearms that **MUST** be reliable and work every time, is invaluable.

He shares with you his philosophies and processes for building rifles you can count on for reliability and functionality. In addition to showing and demonstrating the tools, he demonstrates, step-by-step, how to change a barrel and install a free floating handguard. After studying this course you will be able to design and build unparalleled ARs for yourself and your customers.

The result of achieving your AR15 Riflesmith Certificate is that you will know how to tune existing guns for optimal performance and build up any type of AR rifle from scratch. Also included are professional and very comprehensive notes, online testing, and an AR15 Riflesmith patch for you to proudly wear or display upon successful completion of test.

BE AN AGI CERTIFIED FIREARMS APPRAISER!

Appraise firearms for fun and profit!

Make money appraising guns!

It is an absolute fact that hundreds of millions of dollars in guns will be sold, traded, or inherited every year for at least the next twenty plus years as the "Greatest Generation and Baby Boomers" retire or pass on.

Many of these guns must be formally appraised for estate, resale and tax purposes. This provides you with a little known opportunity to make a profit by providing a desperately needed service! You can get paid for providing your "expert opinion of value" when you become a Certified Firearm Appraiser™ (CFA).

Here are just a few of the many opportunities:

- The IRS requires firearms that are a significant part of an estate be appraised for tax purposes. The same goes for collections of guns being donated to a museum, foundation, or non-profit as a tax deduction.
- Individuals who need money for retirement or need to raise cash have to know what their guns are worth so they can get a fair price.
- In the case of death, surviving spouses or children will often want to sell a deceased person's firearms, but have no idea of their value.
- In the case of bankruptcies, firearms are considered part of an individual's net worth, a certain amount of which, if properly documented, they get to keep.
- In divorce cases, the firearms owned will often have to be valued to allow an accurate division of the assets.

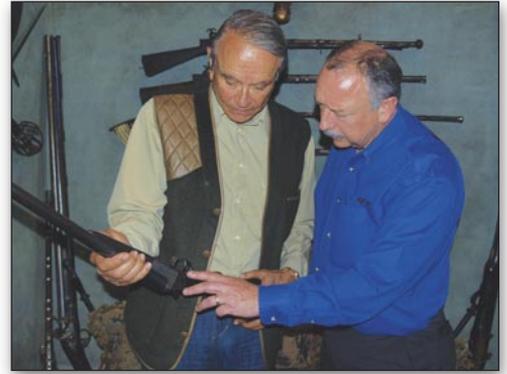

You will be able to help these individuals by providing a professional firearm appraisal, your honest EDUCATED OPINION, and get paid for your services. But you must have the proper training and certification to be able to provide an expert opinion and keep yourself legal. AGI can help you achieve that expertise FAST!

I personally have been involved with appraising firearms for years. I saw the huge need for accurate professional firearm appraisals and realized the opportunity that was readily available to our students and members.

So here is what I did . . . I instructed the AGI staff to recruit the Nation's foremost experts on collecting, appraising and auctioning firearms to create this course. We have built this special course that will enable you to quickly become an AGI Certified Firearm Appraiser™ using knowledge provided from a panel of experts with well over 400 years of combined experience in collecting, appraising and selling firearms. They have invested their entire lifetime learning this information, now in minutes it will become yours.

**THE MORE TRAINING YOU GET -
THE MORE COOL FREE STUFF YOU GET!**

See page three for details!

AGI President Gene Kelly with Greg Martin of Greg Martin Auctions

These are experts you probably could never get to and talk with personally. Or even if you could, it would take you years to extract the information they share in this course. When you enroll in the AGI Certified Firearms Appraiser™ course you will instantly benefit from all of their experience saving you years of trial, error and frustration.

They held nothing back. With an average of 40 plus years experience in the industry, they are at a point in life where they want to share the knowledge they have accumulated over a lifetime. The business lessons they share during these interviews are alone worth the entire investment in this course.

We will teach you how to do research on each firearm and show you, step-by-step, real world examples as we appraise a number of different types of firearms and go through the entire process, filling out the copyrighted appraisal forms we developed exclusively for this course. These forms ensure that you do not leave out any critical details when you are making an appraisal and they will make you look like an expert from the very first job.

This complete course even covers how to market your services, so estates, foundations and attorneys can find and hire you.

Think about all the additional business that could come from passing this course and becoming a Certified Firearm Appraiser™ (CFA). You will be able to advertise that you are a Certified Firearm Appraiser™ and people will come flocking to your gunshop and seek you out for your expertise. Many of these people will want to pay you to sell their firearms for them. Others will just want to know what something is worth and then will

Carey Creech shows Gene some of the finer points of appraising firearms

purchase accessories for the guns from you such as scopes, magazines, cases, etc.

If you offer gunsmithing services, many of these guns may need some restoration, customizing or tuning. This may be the ideal opportunity you have been looking for to expand your hobby or to bring in more cash.

The Perfect Gunsmith and FFL Add On Profit Center!

How much can you make appraising firearms? Well, that is really up to you, and will reflect the knowledge base and level of expertise you develop. Some appraisers charge \$100 per hour while other appraisers charge as little as \$10 per gun when doing large batches of firearms.

But remember this isn't the only way you can get paid. There are opportunities to sell the firearms you appraise, on behalf of your client, and make a commission. Plus all of the previously mentioned add-on sales. You may even get a call from time to time to be an expert witness in a court case or estate settlement and in those cases you can charge a substantial hourly rate. Some people even charge a one day minimum, often as much as \$800 a day or more, plus expenses. They charge this even if they testify or give their opinion for just a few minutes.

We cover how to testify in court confidently and fearlessly. Gene Kelly shares his personal experiences with you and there is nothing to sweat because, as a CFA, you are the expert! There really isn't any downside because everything is based upon your honest expert opinion. But your opinion won't be very valuable unless you have the right credentials. This course gives you those credentials.

When you are an AGI Certified Firearms Appraiser your buddies will envy the opportunities that will come your way and the fact you are making money doing what you love is just icing on the cake! The more guns you handle the more likely a real gem will be placed in your care. You may even be the one who discovers a significant piece of lost history!

Get Certified and Earn this Patch!

You will be able to appraise firearms and a whole new world within the firearms industry will open up to you. The methods and systems taught in the course are also applicable to appraising other personal property and collectibles which can provide additional revenue streams.

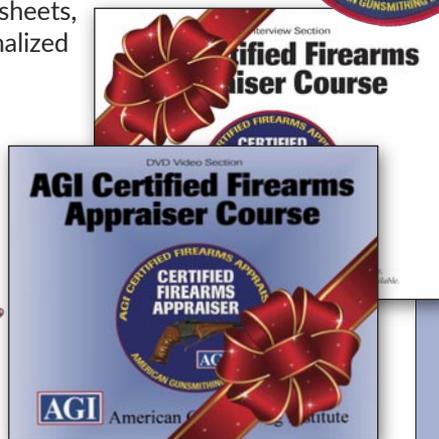

Over 17 hours of instruction on DVDs and audio CDs, online testing, certification, training manual, appraising worksheets, Certified Firearms Appraiser patch and personalized certificate upon passing.

MAKE MONEY CERAKOTING FIREARMS

Become an AGI Cerakote Application Expert!

Everything you need to know to Professionally Cerakote Firearms at home or in your gunsmithing shop.

This in demand finish could become a profit center for your Gunsmithing business or save you a lot of money when refinishing your own firearms. Cerakote is a ceramic based finish that can be applied to metals, plastics, polymers and wood. The unique formulation used for Cerakote ceramic coating enhances a number of physical performance properties including abrasion/wear resistance, corrosion resistance, chemical resistance, impact strength, and hardness. It is an ideal finish for firearms and our new AGI Cerakote Application Course is a comprehensive training course for Gunsmiths covering every aspect of applying a Cerakote finish to firearms. This extensive course covers:

- Workspace requirements
- Tools and equipment necessary
- Set up and operation of equipment
- Preparing firearms for Cerakoting
- Selecting mixing, applying and curing the Cerakote
- Resources on tools, equipment, and supplies

Scan the QR to order!

scan to learn more

Your instructor is Don Harden, an AGI trained Gunsmith with over 12 years experience in applying Cerakote to a wide variety of firearms. He guides you through the entire process from disassembly, preparation, application, to curing and final steps. He shows you exactly what to do, the best way to do it and explains why each step and technique is important. Throughout the course he shares tips, tricks and techniques he has learned from Cerakoting hundreds of different firearms.

Whether you only want to cerakote your own firearms or if you are a gunsmith and want to add Cerakoting to the services you provide to **greatly increase your profit margin** - this course is for you. Every step is covered in detail, starting with all aspects of the setup. Choosing the workspace, lighting, air system, cleaning area, blast cabinet and all the dimensions and features you'll need in a spray booth and a curing oven are presented. Along the way, Mr. Harden gives suggestions on where you can buy each item and explains the options you have in deciding how to configure your system. You will learn all the important considerations necessary so you can customize your own Cerakote operation.

You will understand your Cerakote product options and when to use a particular one. You will learn proper mixing procedures, catalyst ratios, curing temperatures, and curing times. He demonstrates the special techniques you need to employ when using the spray gun to apply the Cerakote. As you follow Don through the entire coating process from beginning to end on four different types of firearms, you will learn how to create a perfect finish.

Create Custom Designs

Don starts by showing you how to apply a single color of Cerakote to a Remington 870 shotgun and how to apply three colors to a 1911 pistol using pre-made stencils in a cool digital camo pattern. Taking the multi-coating process to an advanced level, Don shows you how to apply four different colors of Cerakote to a Ruger 10/22 rifle in a classic woodland camo pattern and how to do a custom stencil pattern on a plastic frame carry pistol using a more complicated stencil pattern designed to look like a giraffe.

Cerakote Revolvers

When you have completed this course you'll truly have all the knowledge you need to begin applying Cerakote to firearms for yourself and others. Not only will they be beautiful and attract attention, they will also have the corrosion and wear resistance Cerakote provides so they will continue to look and function beautifully for many years to come. **Over six hours of detailed instruction on four DVDs! Equal to a three day factory training course without the travel expenses and time away from work!**

BECOME AN AGI CERTIFIED RELOADER

Learn how to Make SAFE hand loaded ammunition

Far more in depth than any other reloading course on the market!

Renowned cartridge designer, gunsmith, and AGI instructor Fred Zeglin addresses reloading from its most basic fundamentals to advanced techniques. This allows the new reloader to begin the process almost immediately with confidence and safety. Popular tools offered by numerous manufacturers of reloading gear are demonstrated and explained in detail. Accuracy is the name of the game for any shooter. Fred talks about what makes a safe, accurate reload and shares simple tricks that will save you hours of trial and error at the reloading bench and range. He also covers bullet casting techniques and advanced precision reloading for long range shooting.

Most people learn reloading strictly from a mechanical 'monkey see, monkey do' view point. In other words, nobody ever completely explains to them WHY operations are performed a certain way or WHAT value they have. In this course Fred shows you, from a gunsmith's perspective, what is happening to the brass when fired and when it goes through the reloading process. This information will make you a well informed reloader and, if you're a gunsmith, will help aid in diagnosing problems with your clients' reloads and guns.

Fred puts the gunsmith's understanding of the subject into the course.

Any novice, intermediate, or experienced reloader will benefit from the clear explanations of the "How's and Why's" of reloading. The concepts of internal and external ballistics are dealt with in a way to aid the reloader in making smart choices; both in purchasing tools and in producing safe, quality ammunition with them.

COVERED IN THIS COURSE:

- History of reloading
- Choosing components
- What is really happening to the brass case
- How to make a load plan for safe, accurate loads
- Introduction to a wide range of reloading resources
- Case trimming - advanced case preparation
- Reloading of rifle cases - single stage press
- Powder scales
- Use of the Lee Loader
- Basic case preparation
- Reloading of pistol cases on a single stage press
- Introduction to progressive reloading
- Introduction to bullet casting
- Alloying and casting lead ingots
- Sizing and lubing cast bullets
- Priming tools and correct seating of primers
- To crimp or not to crimp - dies and bullets
- Manual and electronic powder meters
- Additional resources and suppliers
- Advanced reloading techniques by Darrell Holland
- Step-by-step bullet casting - single/multi cavity molds
- Reloading safety
- Intro to reloading tools
- Case lubrication
- Portable reloading tools
- Advanced reloading tools
- Hardness testing cast bullets
- Use of multi-stage presses

Handloading for the Long Range Shooter:

Learn how to make hand loaded ammunition tailored specifically for long

range shooting. Squeeze the maximum performance out of your handloads!

Riflesmith and competitive shooter Darrell Holland offers step-by-step instruction in the manufacture of superior ammunition. Standard caliber and wildcat cartridges are discussed and reasons for using them explained.

Components such as bullets, powder and primers are examined and selected on the basis of the type of target and the distance where the performance will be best suited. A ton of information that will enhance your capabilities.

If you are serious about Gunsmithing, you need these courses on Trigger Jobs and Systems.

An Advanced Professional Course

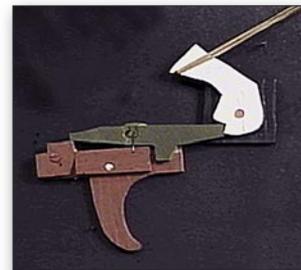

AGI's philosophy is that you can't fix it unless you truly understand how it works. Robert Dunlap will take you step-by-step through the 14 major types of trigger systems that represent the majority of all systems utilized in most firearms.

Extensive detail is given on each system using large mock-ups to clearly represent how each system works along with a discussion and examples of other firearms that use the same or a very similar system. In addition, a "hands-on" trigger job is performed on each specific model covered. **Detailed information for more than 28 models of firearms including:**

- S&W Auto Pistols
- S&W Revolvers
- Colt Double Action Revolvers
- Erma Pistols

8 hours of instruction!

- M-1 Carbine and Garand Rifles
- Colt 1911 Auto & all clones
- Single Action Trigger Systems: Positive, Negative & Neutral (hammer & sear engagement), Weight (trigger pull), Creep (trigger travel)
- Military 2-Stage Triggers: Enfield SMLE, M98 Mauser, Springfield 1903, Brno .22, Spanish Destroyer
- Mauser Rifles (M92 through M98)
- Win.150, 155, 170, 175, 190, 250, 255, 270, 275, 290, 1200, 1300, 1400, 1500 and all variations
- Rem. 870, 552, 572, 740, 742, 760, 7400, 7600 and all variations
- Ruger® 10/22® Rifles
- Winchester M70 (all M70s)
- Walther .22 Rifles
- East German .22 Rifles
- Tools and Equipment
- Triple Sear Systems: Rem. M700, AR15, Mini-14®, M-1, AK47 clones, and SKS Rifles
- Double sear systems: design and adjustment

Sear engagement mock-up.

Visit www.AGIReviews.com or scan this QR code to see video interviews and hear what AGI students have to say about AGI Gunsmithing Courses!

AGI has trained more WORKING Professional Gunsmiths than any other school!

Here's what just a few of our students have to say ...

"I've been enrolled in the AGI Professional Gunsmithing Level 2 program for over a year. The program is excellent. Tuition includes first year of membership in the Gunsmithing Club of America, which is an impressive student and active gunsmith resource. Quality of video instruction, live interaction, blogs and vlogs is excellent.

This program teaches the tried and true Design, Function, Repair approach so you understand how the firearm is designed, how it is supposed to function, and how to avoid modifying a firearm in a manner that makes it unsafe.

I have a bachelors degree in mechanical engineering (not necessary for gunsmithing!) and I have 5+ years of experience as a professional trainer for high end CAD and IT software applications. I know what good instruction looks like. AGI is the real deal. Highly recommended. I have obtained a business license, my FFL, and started a home business (helped greatly by AGI!) and am taking on projects."

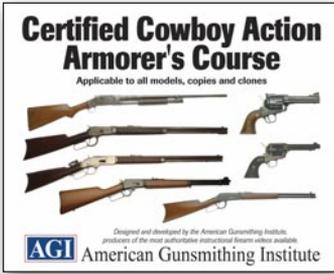

Nolan Denton

"I made the mistake of taking another cheaper gunsmithing course. I knew I made a mistake when I read in one of my lesson books that for further instructional help, go to the AGI website and get a DVD on the subject. When other schools are giving YOU that kind of acknowledgment, then you have to be the best." Gordon Fisher

"Hello, my name is Mike, I have had the opportunity to look at materials from a few different gunsmithing courses and the AGI course is by far the best I have experienced with the professional gunsmiths doing the videos. The classrooms on the in-depth gunsmithing of certain firearms is just amazing and this is by far the best course to get to become a professional gunsmith.

I have enjoyed very much the candor of some of the instructors in the course. It does make everything enjoyable. It helps you learn because you take away the certain things and the experiences of those instructors and you can apply them yourself and it is just been a wonderful experience taking the professional gunsmithing course with AGI." Mike Happel

BECOME AN AGI CERTIFIED COWBOY ACTION ARMORER!

Repair and Tune Cowboy Action Guns!

AGI constantly strives to be at the forefront in providing our students, customers and Gun Club of America Members with up to date educational material

and information. We are proud to offer an AGI Certified Armorer's Course specifically for Cowboy Action Firearms. **Earn your Cowboy Action Armorer's Patch today!** → → → →

This course covers the common cowboy action revolvers such as Colt and Ruger® single actions, lever action cowboy rifles such as the Winchester '92, '94, 1866, 1873, 1876, 1886, the Marlin '94 and '95, the classic Winchester 97 pump shotgun, and all of their clones and copies. The course covers tuning the Single Action Revolver for speed shooting and contains three bonus DVDs and your Certified Cowboy Action Armorer's Patch!

These additional lessons cover gated and non-gated conversions of Colt and Remington percussion revolvers to cartridge (with and without a mill), and an extensive smooth and tune of the Marlin '94. Trigger jobs are covered as well and are applicable to all cowboy lever guns.

THREE BONUS COURSES!

Also included is a great "How-to" Cowboy Action Shooting Course featuring Two Time World Champion Lefty Longridge. This SASS and Cowboy 3-Gun World Champion (AKA Sergeant Joe Alesia, Los Angeles County Sheriffs Deputy, Tactical Instructor and Training Supervisor) takes you through a basic training course in this popular sport.

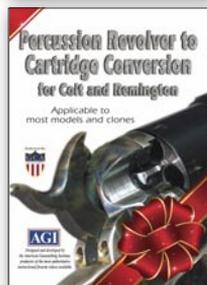

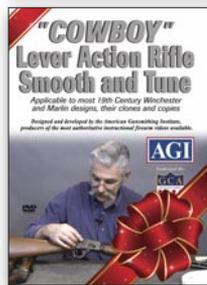

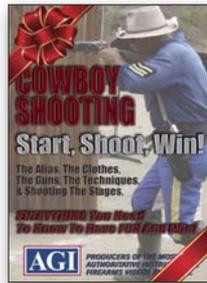

Joe goes into serious detail about the history, clothes, equipment, and match action in cowboy action shooting. You will get a champion's, and highly sought after trainer's, tips on selecting guns and leather, as well as the actual shooting. Learn the proper stance, sighting, grip, trigger control, and target engagement and how to overcome the most common impediments to competitive scoring.

Course includes: 7 Armorer's Course DVDs, 3 Bonus DVDs, testing, certificate, and Cowboy Action Armorer's Patch issued upon successful completion of course and testing.

NEW! GUN PARTS & ACCESSORIES

Get 20% off your entire parts order plus FREE SHIPPING!

Holland's Shooting Supply is now part of the AGI family!

For over 30 years Holland's Shooting Supply has been renown for quality rifle parts, accessories, supplies and more! Now you can get these parts through AGI!

Holland's Quick Discharge™ Muzzle Brakes

These brakes set the standard by which others are judged! Our brakes allow you to see the impact of each shot and the blank area on the bottom eliminates the problem of dust and dirt getting back to you while you're shooting. We offer several styles of specialized muzzle brakes to the shooting industry. Our models include the Holland's Quick Discharge™ and are constructed from stainless steel and blued chrome-moly. Quick Discharge™ Brakes are available in multiple sizes and in 24 and 28 TPI options. We use only the best heat-treated materials and CNC (computer numerically controlled) machinery in the manufacture of our unique brakes! Adds 1.25" to the rifle's length.

- Drastically reduces muzzle rise
- Adds 1¼" to barrel length
- Unique triple baffle design
- Reduced muzzle blast
- Measured reduction of 45%
- Easier cleaning

Holland's Radial Baffle Muzzle Brakes

Our Radial Baffle Muzzle Brake features a larger blank area on the bottom (compared to the QD brake), eliminating the huge dust cloud on 360 degree hole pattern brakes. Made from 17-4 stainless steel. The final look after bead blasting provides a uniform, attractive appearance to the brakes that also prevents unwanted glare from the sun or any other abnormally bright condition! Radial Baffle Muzzle Brakes add an additional 2 inches to the firearm's overall length.

Holland's Radial Baffle Muzzle Brakes offer improved recoil reduction due to the unique radial baffle design. Radial baffles trap the gas and divert it around the shooter in a rearward direction, increasing the recoil reduction over a 90° exhaust pattern. Radial baffles increase the surface area for the gas to work against, providing exceptional performance. Our blank area on the bottom of the brake virtually eliminates the dust cloud signature and prevents dirt and debris from being kicked around the shooter. Imagine being miles from the truck and getting something in your eye from a 360° ported brake! Holland brakes are better by design; as a long range hunter and shooter Darrell knows what it takes to get the job done right!

Thread sizes include: 1/2x28, 9/16x28, 5/8x24 and 3/4x28. Ask about our thread protectors as well. If you are looking for MAXIMUM recoil reduction, the new Radial Baffle Design is the ticket. All Radial Baffle brakes are machined from 17-4 stainless steel and heat-treated to a Rockwell of 42-44 on the "C" scale.

IMPORTANT NOTE: Holland's Signature Series Quick Discharge™ and Radial Baffle Muzzle Brakes require a Gunsmith Fit and adjustment to ensure proper dimensions, fit, and operation for your caliber and firearm. Brakes come standard with a .25 (1/4") diameter caliber clearance, which must be increased if shooting a larger diameter bullet. If you are not trained and equipped to do this fitting, take your brake to a qualified Gunsmith to be fitted. Installation instructions are included with each brake.

Holland's Remington 700 Spring Kits

Every spring you need for your Remington 700 is in the Holland's Deluxe Spring Kit! Includes: trigger spring for a crisp 2 lb. pull and a new firing pin spring which improves lock time, as well. Both Short Action and Long Action Deluxe Spring Kits are available. The improved ejector spring provides smoother ejection without case damage and the heavy duty bolt release spring discussed above gives positive bolt stop action! Remington 700 Trigger and Bolt Stop Springs Only kits are also available.

FOR SUPER TUNING YOUR RIFLES!

Holland's Competition Recoil Lugs

If you're thinking about rebarreling your 700, Savage or Sako (new style), then this is the recoil lug you want. Heat treated and thicker than the factory offerings, it also has more surface area. Dual draft angles allow for easy removal from the stock, and the lug is pinned for switch-barrel options and positive alignment. This is the best replacement lug there is. Used by more custom gunsmiths than all other lug designs combined.

Holland's Signature Series Scope Levels

Holland's Signature Scope Levels are the official level of the USA F-Class Shooting Team!

Holland's Signature Series Scope Levels aid the shooter in improving accuracy and consistency at long range and preventing unwanted cant or lean in the rifle which can change point of impact or even cause a miss! Scope Levels are available in 1", 30mm, 34mm, and 35mm sizes to fit a wide variety of scopes and are machined from 7075-T6 aluminum and hard black anodized. Holland's Reflective Illumination makes these scope levels some of the brightest in the industry! Scope Levels are designed to be seen from the firing position and are fully ambidextrous allowing for left-hand or right-hand placement for ideal viewing for each shooter. The sculpted ergonomic design does not protrude further than most windage and parallax and with no sharp edges or corners Holland's Signature Series Scope levels make an attractive, ergonomic, and extremely useful accessory on your long range rifle. Get one for every scope you own.

Holland's Signature Series Pillar Bedding Columns

Nobody beds a stock like Darrell Holland. You too can use the same technology Darrell uses in the bedding of his competition rifles. Aluminum columns are machined from 7075 T-6 aluminum and special screws isolate the trigger guard/floorplate from the bedding process. This results in more consistent torquing of the action screws. Holland's Pillar Bedding Columns are available in ADL and BDL styles to fit Long and Short Action Remington 700 Rifles.

Check out the AGI Pillar Bedding Course on page 43 for training directly from Darrell on installing bedding pillars in your rifle for a rock solid bedding platform to increase the accuracy of your rifle!

Holland's Signature Series Fiberglass Stock Packages!

Holland's Signature Series Fiberglass Adjustable Comb Stocks are the perfect platform for your custom rifle build! Available in Long Action and Short action packages, all stocks are CNC machined and bored for 5/8" aluminum columns. Stocks are machined with a Douglas #3 barrel channel and they will accept barrels up to and including Remington Varmint profiles.

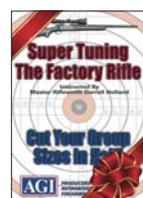

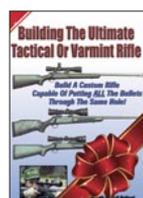

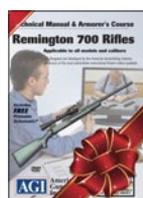

The package includes either the Holland's Signature Series BDL Long Action or Short Action stock with adjustable comb and two (2) height shims, one large and one small, to get the perfect cheek weld for each shooter. Also includes the Holland's Signature Series BDL Bedding Pillars so you can have a rock solid platform for your rifle.

Available in limited quantities with multiple color options to choose from. Act fast to secure your package now. Color and patterns shown for each variation are representative only. Each stock may have slight differences in pattern and color ratios. **Plus**, we have included the AGI Pillar Bedding Course on DVD, a Pachmayr Decelerator recoil pad, and flush cups. You will have everything you need to start your custom rifle build right!

CHANGE YOUR 10/22® INTO THE COOLEST LOOKING AND MOST ACCURATE RIFLE AROUND!

Jack Landis starts off by showing many finished configurations of the gun and methodically moves on to the various parts of the firearm that can be customized. He takes a look at the heart of the gun, the receiver (or action). Jack explains the attributes of various barrels, stocks, trigger housings, scopes, magazines, as well as individual parts that will enable you to make informed decisions about the type of gun you want to build. Jack also spends some time at the mill and lathe showing us how to include some practical modifications, like boring/drilling/tapping rear cleanout holes in the receiver, squaring up the bolt face/adjusting headspace and even how to do a trigger job. 5 hours

BUILD AN ACCURATE, RELIABLE, CUSTOMIZED MILITARY BOLT ACTION!
 This 5 hour course is designed to teach you how to super tune all the popular military bolt actions. AGI's Ken Brooks tells you which models are safe to build-up and which ones aren't, including which work best with magnum cartridges. This course focuses on tuning, strengthening, and accurizing the action for both reliability and function. Ken not only shows you HOW to perform each procedure, he also explains WHEN and WHY to do them. Dozens of custom modifications are shown; some for reliability, others for accuracy, and many for personal taste. We show you how to perform procedures without expensive tooling and which tools are a "must have." **DVD#3284 ~~\$149.00~~ plus s/h **\$99** ONLINE#3284OL ~~\$120.00~~ **\$99****

MAKE YOUR FIREARMS LOOK NEW BY REFINISHING THE STOCKS!
 Master Gunsmith Gene Shuey teaches you how to strip off the old finish, remove dents, fix cracks and scratches, preserve checkering, sand and fill the grain, and apply a new custom oil finish. Special techniques for getting the correct color stain and the proper way to apply and treat the finish are shown. The end result will be a beautifully finished stock you can be proud of. Guaranteed! 2 hours

BUILD A CUSTOM AR-15

Master Gunsmith Mark Foster, shows you many examples of triggers, grips, optics, lights, rails, barrels, stocks, muzzle brakes, compensators, flash-hiders, sights, handguards, gas systems, and more. He outlines what works well, tells you what to avoid, and explains why. Mark builds a variety of "mission-oriented" ARs and reviews what he chose for each and why. Mark also discusses and shows some of the tools needed for changing barrels and handguards, but more importantly, demonstrates step-by-step how to change a barrel and install a free-floating handguard. 3.5 hours! *This course is included in the Certified AR15 Riflesmith Course on page 30.* DVD#3464 ~~\$79.95~~ plus s/h **\$49.95** SAVE \$30!

IF YOU'VE EVER WANTED TO BUILD A TACTICAL SHOTGUN THIS IS THE COURSE FOR YOU!

This two hour course begins with a discussion of accessories and options available, then breaks down the actual work into its basic steps. Gene Kelly shows what modifications are actually worth doing and have value, what is legal and what generally is not. Basic tuning and reliability modifications are covered in detail. Learn to measure the barrel and how to properly shorten and crown it, install sights, drill and tap for screws, refinish your gun with Gun Kote, a tactical finish, and too much more to list here! If you've ever wanted a tactical shotgun, or wondered how you could build one on your own, this is the course for you!

The REAL Story of Christmas

In this politically correct world of "Happy Holidays" I would like to buck the trend by revisiting the Real story of Christmas. It may have been a long time since you have heard it . . .

Long ago, about 2000 years, when King Herod ruled Judea (now part of Israel), God sent the angel Gabriel to a young woman who lived in the northern town of Nazareth. The girl's name was Mary and she was engaged to marry Joseph. The angel Gabriel said to Mary: 'Peace be with you! God has blessed you and is pleased with you.' Mary was very surprised by this and wondered what the angel meant. The angel said to her 'Don't be afraid, God has been very kind to you. You will become pregnant by the Holy Spirit and give birth to a baby boy and you will call him Jesus. He will be God's own Son and his kingdom will never end.' Mary was very afraid but she trusted God. 'Let it happen as God chooses,' she replied to the angel. Gabriel also told Mary that her cousin Elizabeth who everyone thought was too old to have children, would have a baby boy whom God had chosen to prepare the way for Jesus.

Mary said goodbye to her family and friends and went to visit her cousin Elizabeth and her husband Zechariah. Elizabeth was very happy to see Mary. She knew that Mary had been chosen by God to be the mother of his Son. An angel had already told Zechariah that Elizabeth's baby would prepare people to welcome Jesus. He was to be called John. Mary stayed with Elizabeth about three months and then returned home to Nazareth.

Joseph was worried when he found out that Mary was expecting a baby before their marriage had taken place. He wondered if he should put off the wedding altogether. Then an angel appeared to Joseph in a dream and said: 'Don't be afraid to have Mary as your wife.' The angel explained that Mary had been chosen by God to be the mother of his Son and told Joseph that the baby would be named Jesus which means 'Saviour' because he would save people. When Joseph woke up, he did what the angel had told him to do and took Mary as his wife.

At this time, the land where Mary and Joseph lived was part of the Roman Empire. The Roman Emperor Augustus wanted to have a list of all the people in the empire, to make sure they paid their taxes. He ordered everyone to return to the town where their families originally came from, and enter their names in a register (or census) there. Mary and Joseph travelled a long way (about 70 miles) from Nazareth to Bethlehem, because that is where Joseph's family came from. Most people walked but some lucky people had a donkey to help carry the goods needed for the journey. Joseph and Mary travelled very slowly because Mary's baby was due to be born soon.

When they reached Bethlehem they had problems finding somewhere to stay. So many people had come to register their names in the census, that every house was full and every bed was taken in all of the inns. The only shelter they could find was a stable or cave with the animals. In this poor place Mary gave birth to Jesus, the Son of God. In those days it was the custom to wrap newborn babies tightly in a long cloth called 'swaddling clothes.' Jesus' bed was the manger from which the animals ate their hay.

In the hills and fields outside Bethlehem, shepherds looked after their sheep through the long night. As the new day began, suddenly an angel appeared before them and the glory of God shone around them. The shepherds were very, very scared, but the angel said, 'Don't be afraid. I have good news for you and everyone. Today in Bethlehem a Saviour has been born for you. You will find the baby lying in a manger.'

Then many more angels appeared, lighting up the sky. The shepherds heard them praising God singing: 'Glory to God in highest, and peace to everyone on earth.' When the angels had gone the shepherds said to one another, 'Let's go to Bethlehem to see what has happened.' So the shepherds went to Bethlehem and found Mary and Joseph. The baby Jesus was lying in a manger as they had been told. When they saw him, they told everyone what the angel had said and everyone who heard the story was astonished. Then the shepherds returned to their sheep, praising God for sending his Son to be their Saviour.

When Jesus was born, a brand new bright star appeared in the sky. Some Wise Men in faraway countries saw the star and guessed what it meant. They were very clever men who studied the stars and had read in very old writings that a new star would appear when a great king was born. They set out to find the new king and bring him gifts.

The Wise Men followed the star toward the country of Judea and when they got to the capital called Jerusalem they began to ask people: 'Where is the child who is born to be king of the Jews?' Herod, the king of Judea, heard this and it made him very angry to think that someone might be going to take his place as king. Herod sent for the Wise Men to come to him. He told them to go on following the star until they had found the baby king. He said: 'When you have found him, let me know where he is, so I can go and worship him.' But Herod did not tell them that he really had an evil plan in mind to kill the new king.

The Wise Men followed the star toward Bethlehem (where it said that the king would be born in the old writings). It seemed to stop and shine directly down upon the place where Jesus was. The Wise Men entered the house where they now lived and found Jesus with Mary. They bowed down and worshipped him. The Wise Men spread the gifts they had brought before Jesus. The gifts were gold, frankincense and myrrh. The Wise Men were warned in a dream, by God, not to go back to Herod. So they returned home to their countries in the East by a different way.

When the Wise Men had gone, an angel appeared to Joseph in a dream. 'Get up,' the angel said, 'take Jesus and Mary and escape to Egypt. Stay there until I tell you, for Herod is going to search for Jesus to kill him.' So Joseph got up, took Jesus and Mary during the night and left for Egypt, where they stayed until Herod died.

When Herod realized he had been tricked by the Wise Men, he was furious and he gave orders to kill all the boys aged two or younger in Bethlehem and the surrounding area. This was to try and kill the new King, as his plan to find the location of the new king from the Wise Men had failed.

After Herod died, Joseph had another dream in which an angel appeared to him. The angel said, 'Get up, take Jesus and Mary and go back to Israel, for those who were trying kill Jesus are dead.' So Joseph got up, took Jesus and Mary and they went back to Israel. But when he heard that Herod's son was now king of Judea, he was afraid to go there. So instead they went to Galilee, and lived in their old town of Nazareth.

Jesus is the Reason for the Season

If you are interested in investing in the ultimate peace and personal security that will overcome whatever happens with your finances, or in the markets, politics, the country, or even in the world, then this is my personal recommendation: Find a Bible and read John 3:16-18 "For God so loved the world, that He gave His only begotten Son, that whoever believes in Him shall not perish, but have eternal life. For God did not send the Son into the world to judge the world, but that the world might be saved through Him. He who believes in Him is not judged; he who does not believe has been judged already, because he has not believed in the name of the only begotten Son of God."

Why do we need this? Well, very simply, there is an unbridgeable chasm or gap between us and God. Because God is perfect and Man is not. The Bible teaches that God himself created a bridge over that gap through his Son Jesus' death and rebirth, so that we can have a perfect relationship with him and to provide us with peace and security.

Why did he do it this way? Quite simply, I don't know why, other than the Bible teaches that "God's ways are not our ways" and that God loves each and every one of us and even knows the number of hairs on your head. I for one think that's GOOD NEWS!! So don't let the crazy things going on in this world overcome you, get some ultimate security.

Merry Christmas and May God Bless You and Yours,
Gene Kelly, President, American Gunsmithing Institute
